TROVO BOT v2

Thank you for using our BOT system.
In this document you will find out how to maximise our BOT to have an advantage when streaming on "Trovo".

Features:

- **Anti-Bot detection.**

We achieve this by making our BOTs as human as possible. They explore chat options, go to other channels and follow different people. When they are watching your stream they will go to another streamer for a few minutes before coming back. This will ensure that the BOT does not only watch you. Your views fluctuate realistically.

- **Proxy support**

If you want to get viewers and want to make them count you need to connect a proxy to our BOT. We made this extremely easy for you. You just need to paste your list into the "proxyList.txt" file in a format: IP:PORT. Our BOT does not support usr/psw proxy authentication so you will need to use IP auth.

- **TROVO 500 watchtime bot.**

That is true, if you use our BOT your Trovo 500 watchtime will count. Be sure to give it up to a day to update the newest watchtime.

- **Chatbot**

If you want your BOTs to chat you need to add a wordlist. We supplied one list for you in a folder called: bot_chat. The list is called "poruke".txt. Do not change the name of the list as it can cause the BOT to stop working. Feel free to edit the list and add your own words/sentences.

Main menu:

In the main menu you will find 2 options:
- Start
- Config

By typing in start the BOT will start immediately and go to work on making you a streamer.

If you type in config you will start the configurator.

Configurator:

- Stream link : The link to your livestream. Ex: https://www.trovo.live/YOURNAME

- Diversion link: The link that will open first when you start the BOT.
  (We suggest leaving it at: https://www.trovo.live/)

- Number of views: The number of BOTs you want to spawn.
  (We suggest starting with 20 and moving up every day by a few BOTs)

- Search term: What the BOT will type in to find your channel via search on Trovo.
  Ex: YOURNAME

If you have any questions regarding the Trovo BOTv2 feel free to ask me on:

0xDEADx0@protonmail.com

Also I would like to add that with every new version of the bot you will receive a free update via EMail.
Don't throw your receipt away. If you lose it you will lose access to new releases.
BOT codes:
[G] means good, [!] means error, [?] means that there was an element missing.
